

FISHING ACCESSORY RING

ABSTRACT OF DISCLOSURE

[0025] A fishing accessory ring is provided, which advantageously provides at least one accessory ring near the reel seat or rod shaft. In one exemplary embodiment, the accessory ring comprises a first aperture configured to engage a circumferential portion of a support member, e.g., a rod or rod and reel combination, and at least a second aperture configured to extend away from such first aperture. In another exemplary embodiment, such accessory ring comprises an additional (third) aperture configured to extend away from such first aperture. In another embodiment, such accessory ring is configured with a first aperture configured to engage a support member, and a plurality of additional apertures positioned at least partially around the circumference of the first aperture. In another exemplary embodiment, said first aperture comprises a plurality of pieces, comprising at least a first piece removably coupled to a second piece, and wherein said assembled form of said plurality of pieces is configured to engage a circumferential portion of a rod or rod and reel combination. In another exemplary embodiment, said first aperture is threaded, wherein said threaded portion of said first aperture is configured to thread onto a threaded portion of a rod or rod and reel combination. In another exemplary embodiment, such first aperture is configured to engage a reel seat as well as a tab of a reel hood (effectively acting as a reel hood and accessory ring, at the same time).
